contribute less t appliance conta would be leaked over a period of	to global warming than ains a refrigerant fluid w d to the atmosphere, th	a refrigeran ith a GWP e e impact on p interfere w	t with l equal t global	gerant with lower global warming potential (GWP) would nigher GWP, if leaked to the atmosphere. This o 675. This means that if 1kg of this refrigerant fluid warming would be 675 times higher than 1kg of CO2, refrigerant circuit yourself or disassemble the product
